Subject: Microsoft Settlement.

In the past I used IBM OS2, Mac and LINUX OS systems.
None were as easy, cheap or stable as Microsoft.
There was always one serious draw-back, whereas Microsoft is the most positive.

The problem with Microsoft products is they are boring; they work almost all the time.
That is why I play around with LINUX. but it requires technical expertise.

Others must have felt the same or there would be a greater abundance of them.
